

Product Requirements Document (PRD)

Project: Rentora - Custom MVP Rental Marketplace

1. Project Overview

Goal: To build a scalable, high-performance Minimum Viable Product (MVP) for an equipment rental marketplace. The system will be built using a custom architecture (HTML, CSS, JS, PHP, MySQL) to avoid the overhead of heavy CMS platforms.

Tech Stack: Frontend: HTML5, Tailwind CSS, Vanilla JavaScript. Backend: PHP 8.x. Database: MySQL.

2. System Architecture & Pages

- **Home:** Hero section, Call-to-Action (CTA) for Renting/Listing, Featured Categories, How it works summary.
- **How It Works:** Detailed step-by-step guide for renters and equipment owners.
- **List Equipment:** Dedicated form to capture owner details, equipment specs, images, and pricing.
- **Request Equipment:** Form for renters to search/request specific equipment.
- **Trust & Safety:** Platform guidelines, terms of service, and safety policies.
- **Contact:** Standard contact form, business email, and QR Code integration for quick access.

3. Backend (PHP + MySQL) Requirements

The backend will handle form submissions securely, store data in a MySQL database, and trigger email notifications.

MySQL Database Schema (Initial)

Table Name	Purpose	Key Columns
users	Store basic user info (for future login integration)	id, name, email, phone, created_at
equipment_listings	Data from 'I Want to List' form	id, user_id, equip_name, description, price, status
rental_requests	Data from 'I Want to Rent' form	id, requested_item, renter_name, contact_info, dates

4. Integrations & Missing Features Added

- **Security:** PDO Prepared statements for SQL injection prevention. CSRF tokens on all forms.
- **Spam Protection:** Integration of Google reCAPTCHA v3 or Cloudflare Turnstile.
- **API Sync:** PHP cURL scripts to push MySQL data to Google Sheets/Airtable as a backup/admin view.
- **QR Code:** Dynamically generated or static QR code linking to the mobile request form.

5. Master AI Prompt (For generating code with any AI)

You can copy and paste the text below into any AI to generate the exact code for this project:

Act as an Expert Full-Stack Developer. I need to build a custom MVP Rental Marketplace named 'Rentora'.

Tech Stack: HTML5, Tailwind CSS (CDN), Vanilla JS (Frontend) and PHP (OOP/PDO) + MySQL (Backend).

Requirements:

1. Frontend Pages: Home, How It Works, List Equipment, Request Equipment, Trust & Safety, Contact.
2. Backend: PHP scripts to handle form submissions securely (prevent SQL injection).
3. Database: Provide the MySQL schema for 'equipment_listings' and 'rental_requests'.
4. UI/UX: Make it highly modern, responsive, and mobile-friendly.
5. Email/API: Include boilerplate PHP code to send an email on form submission and a cURL request to send data to a Google Sheets webhook.

Please start by providing the complete MySQL database schema and the PHP backend connection script (db.php).
